

Robin's Quarterly Review

Submit to Manager

My Name	My Manager
Robin Lee	Donny Amalo

Quarter: Q4 2023

My Personal Ratings Assessment

Met Expectations

My Accomplishments

Accomplishment	Related OKR(s)	Details
Correcting ACV Calculations	Reduce QR and ACV Cases	It was discovered that there was a practice these different calculation problems that created cases for ou able to include them with the main
Reduce Future Renewal Issues with ACV	Reduce QR and ACV Cases	Renewal of Renewal Opportunities some oversight in development. Th retroactively adjusted contracts to This also allows reports that previc reflection of Total ACV. So not only issues and crediting.
Maintained QCP and related developement resources to improve future development	Reduce Redundancies with QCP Development	Much of this work was cleaning up much of the bandwidth to clean up and related code to help resolve su up would be more valuable as we a

Helped add more robost logic to handle re-org development and debugging	(Odo OKR) Solution Engineer Survey Preventative Development	Last 2 Re-Orgs (Feb and Sept) hav Role names would be changed (wi could only guarantee that Role Nar suggested that we add preventati using less frequently used data to There was another un-warned re-r routing, but this was a much small and it took about 2 months of deve

My Learnings

What I learned this quarter	What actions have I taken/will take related to this learning
With new Salesforce CPQ, we lost some visibility into debugging our own issues and we're not able to always fix problems easily on our own.	I need to re-evaluate what the steps of debugging should be for issues withou I need to spend more time training/learning what we **can** debug (and what we create a case with Salesforce). I will definitely continue reading discussions and threads about how other org opacity when trying debug issues with Salesforce CPQ, so I can tech design n architecture with ease of debugging in
I think one thing I learned was how fragile our QR/ACV (QCP) calculations are to bugs and issues. For something that is so critical to run correctly for day to day business operations, we don't seem to have high enough standards for automated testing QCP development changes. To account for this lack of automated testing we rely heavily on stakeholder testing (takes a lot of time from very busy business-critical teams) and it is very dependent on humans catching errors. -Early in Q1, I received a question about QR/ACV that actually led to a possible bug that was missed by many people who tested the functionality. I think it was very lucky that it's only been this one issue so far.	I would like to re-visit finding some method of automating some of the testing Desk team does for major QCP changes. I think one of the starting points is to existing automations we have for automated testing by discussing strategies is to have very well known testing situations automated, but ideally with low m so our developers can easily maintain it)

My Career Goals (Set 2-3 goals for the upcoming quarter)

What I want to accomplish	How I plan to accomplish it	Status	Quarter
Practice Tests and Training for Platform Developer Certification	I plan on allocating time for studying with tickets. In the past, I've been bad about officially setting aside time so hoping to do that this quarter.	In progress	Q4 2023

Write and prepare training for our QCP and QR/ACV	I expect there to continue to be tickets and requests around QCP to developed in the future, but I will plan on allocating some of the development time to writing down the related functionality on existing documents. I think it's important that some of the QCP knowledge is not just in my head and in code, especially since it may look like this is where much of our business calculations are run.	Done	Q4 2023
