SENIOR SALESFORCE DEVELOPER

Salesforce developer with 5+ years across Salesforce engineering and quality, including 4+ years building and supporting complex Salesforce CPQ solutions. Deep experience translating Finance, Crediting, Deal Desk, Renewals, and Revenue Operations needs into maintainable quote-to-cash automation. Known for ownership of business-critical ACV and quota-relief calculations, technical design, developer enablement, and a quality-first approach grounded in production support and testing.

CORE SKILLS

Salesforce: Salesforce CPQ, QCP (Quote Calculator Plugin), Apex automation, Salesforce administration, custom automation, sandbox management, production support

Quote-to-Cash: Pricing, discount schedules, amendments, renewals, contract data, ACV, quota relief, data integrity

Engineering: JavaScript, technical design, code review, debugging, UAT, regression testing, Jira, TestRail, Agile delivery

Leadership: Cross-functional requirements, architecture tradeoffs, stakeholder alignment, mentoring, documentation, developer enablement

PROFESSIONAL EXPERIENCE

QUALTRICS — Provo, UT

Salesforce Developer | March 2022–Present

Promoted to internal engineering level L4 in 2023

- Serve as a core developer and maintainer for a large-scale Salesforce CPQ implementation, building custom QCP JavaScript pricing logic for requirements beyond standard platform functionality.
- Lead technical ownership of Annual Contract Value and Quota Relief automation, partnering with Finance-adjacent Crediting, Deal Desk, Renewals, Sales, and Revenue Operations teams; reduced manual intervention in ACV and quota-relief data by 75%.
- Produced 40 technical designs representing 182 story points of CPQ and Professional Services development, enabling teammates to implement complex changes with less ongoing intervention.
- Migrated quote automation from asynchronous Apex to QCP JavaScript so calculated fields update immediately on save, improving reliability for quote configuration and downstream order-form generation while reducing false-positive support issues.
- Helped architect pricing standardization with discount schedules and selective proration, plus a simplified amendment process designed to reduce Deal Desk workload and improve contract-data and forecast accuracy.
- Grew into the team’s ACV/Quota Relief subject-matter expert, cutting typical issue diagnosis and resolution from multiple days to a few hours while guiding developers through technical design, code review, and quote-line automation.
- Evaluated custom versus out-of-the-box CPQ approaches with Salesforce support, advocating for simpler, more maintainable solutions and documenting calculation behavior for technical and business stakeholders.
- Redesigned Solution Engineering case-assignment workflows to place routing ownership with the business team and add immediate failure notifications, reducing Salesforce maintenance dependency and replacing delays that could previously last weeks.

Software Test Engineer | March 2021–March 2022

- Served as primary manual tester for 139 of 181 tickets in one review period, delivering actionable feedback and leading stakeholder UAT for business-critical Salesforce workflows.
- Expanded onboarding documentation from 10 to 50 pages, reducing reliance on shadow-based training and helping new team members contribute sooner.
- Analyzed historical coverage and frequently changed Salesforce areas to prioritize regression automation; automated recurring TestRail milestone updates and maintained historical testing data.
- Supported Salesforce production issues during team attrition and onboarded a new QE through structured documentation, process training, and cross-functional handoff.

Product Specialist | November 2019–March 2021

- Specialized in the Qualtrics 360 platform, developed complex customer solutions, and mentored a new team member who was recognized for high productivity within two months.
- Built internal workflow improvements for engineering-issue regression tagging and support routing, and proposed an IP-restriction approach for survey-response protection.

GEORGIA INSTITUTE OF TECHNOLOGY — Atlanta, GA

Undergraduate Researcher | October 2016–July 2019

- Published four computational materials-science papers, including one as first author; presented at an AIChE conference and trained junior researchers using technical manuals and hands-on instruction.

EDUCATION

Georgia Institute of Technology — Bachelor of Science, Materials Science and Engineering, May 2019

Minor in Physics | Highest Honors
